

MAINTENANCE AND CLEANING

STAINLESS STEEL CARE AND CLEANING INSTRUCTIONS

Our door pulls are made from high-strength Stainless Steel 304 & 316 alloy material for rust, corrosion and stain resistance in wet(rain), ice(snow) or dry environments.

Stainless steels are very resistant to rust, however this does not mean that they are impervious to it. Stainless Steel must be kept clean and free from contaminants.

Biweekly cleaning with mild soap and water and a cotton cloth is recommended. Stainless Steel cleaners from your local hardware shop is best to provide along-lasting shine.

DO

- Wash with mild soap or detergent mixed with warm water.
- Rinse with clean water adequately.
- Wipe the surface completely clean with dry cloth or dry towel.
- Remove any water stain or marking on the surface of Stainless Steel.

DONT'S

- Do not use abrasive cleaners that will scratch the surface (scratches are not visible in Satin Finish, but they are harmful).
- Do not use steel wool or steel brushes.
- Avoid dragging rough items across the surface.
- Avoid using hard water, salty water or acids near the Stainless Steel
- Do not use bleach or other cleaners that contain chlorine.

If the product is used at place where water is frequently used (washrooms, showers, near kitchen sinks, others) It is advised to wipe the surface after water use every time so that the chances of corrosion are minimized.
